

WaterWise Fall Brown Bag Workshop Series

Native and Adapted Plants

Native plants provide pollen, nectar, food, shelter and nesting sites for birds and beneficial insects while requiring less water, fertilizer, and little to no pesticides. Bring your lunch and join us to hear Dr. Dotty Woodson as she returns to Frisco to discuss the benefits of incorporating native plants into your landscape.

Topics covered will include:

- An introduction to native and adapted plants
- Care and maintenance of native plants in your landscape
- Examples of species that will thrive in our North Texas climate

About the Speaker

Dr. Dotty Woodson is an Extension Program Specialist for Water Resources with Texas A&M AgriLife Research and Extension in Dallas, Texas. Woodson addresses landscape water conservation and quality through professional trainings, public education programs, demonstrations and mass media, covering landscape design and management, plant selection, rainwater harvesting, rain gardens, drip irrigation and irrigation efficiency. She is a Horticulturist, Licensed Irrigator, and Rainwater Harvesting Professional, and also appears weekly on NBC DFW Sunday Morning News to discuss water conservation.
